# Minecraft Java VS Bedrock Edition

## Comparison Chart

Minecraft: Java Edition	Minecraft: Bedrock Edition
It is the original version of the Minecraft available for Windows, MacOS and Linux through Minecraft.net or retailer gift cards.	This is the multi-platform family of edition of Minecraft launched initially for the Google Play's Xperia PLAY.
There are thousands of mods available for install in the Java Edition.	There are no mods in Bedrock Edition; instead, there are add-ons.
The Minecraft Marketplace is not available in the Java Edition.	The Minecraft Marketplace allows players to buy a lot of things such as Maps, Skins, Worlds, etc.
The Java Edition does not provide much in the context of parental controls.	The Bedrock Edition requires an Xbox LIVE account which comes with privacy settings customization.
It has performance issues such as longer loading times, reduced render distance, etc.	It is very performance-focused with faster loading times and optimized to run on just anything.
The cross-platform play is only available between Windows, Linux and MacOS.	It enables cross-platform play meaning players across all platforms can team up with each other.
